## **DETAILED ACTION**

### ***Allowable Subject Matter***

**Claims 1-21 are allowed in view of the prior art.**

The following is an examiner's statement of reasons for allowance:

As for claim 1, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a system for acquiring position information relevant to a specific axis comprising a movable apparatus that has first and second faces at a same side associated with a parallel to the specific axis, the faces being at an angle to one another that is non-parallel to the axis, and an interferometer that directs a first and second beam to the first and second faces, respectively, the interferometer also combining the beams, and beam-steering members that allow the first and second beam paths to vary in unity with the displacement of the movable apparatus along the specific axis, in combination with the rest of the limitations of the above claim.

As to claim 10, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a method of utilizing an interferometric system to acquire position information of a movable apparatus along a specific axis, the method comprising manipulating first and second beams directed to the movable apparatus via reflections so that each beam path of the first beam is symmetrical to a corresponding beam path of the second beam when the movable apparatus is in a beam symmetry position along the specific axis, followed by combining the first and second beams to interferometrically acquire position information, in combination with the rest of the limitations of the above claim.

As to claim 16, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a system for acquiring position information relevant to a specific axis, the system comprising a wafer stage having first and second surfaces on a side, the stage movable in the X-Y-Z plane, a plurality of optical members that define first and second beam paths for a first and second beam, the members located beyond projections of the extreme perimeter of motion of the stage in the Z direction, with the first and second beams being combined to acquire interferometry-based determinations regarding movements of the stage in the Z direction, in combination with the rest of the limitations of the above claim.

For further reasoning for each claim, see the applicants' arguments dated April 24, 2006 in response to the previous Office Action of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
